Attachment theory (attachment theory) is a psychological theory that describes the relationship between a child and their primary caregiver. It was developed by John Bowlby and Mary Ainsworth. The theory suggests that children develop a mental model of their caregivers and their behavior, which influences their emotional and social development. The theory is based on the idea that children have an innate need for a secure attachment to a caregiver, and that this attachment is crucial for their healthy development. The theory has been widely studied and has led to the development of attachment-based interventions for children with attachment disorders.

### Attachment Theory - The Role of the Primary Caregiver

Providing a secure attachment to a child is usually a goal for many parents and caregivers. This is often achieved through consistent and responsive caregiving. The primary caregiver's role is to provide a safe and secure environment for the child, which allows them to explore the world and develop their social skills. The theory has been widely studied and has led to the development of attachment-based interventions for children with attachment disorders.
