Abstract We consider the computational complexity of determining whether a system of equations over a fixed algebra A has a solution. This leads to two problems,

Przemysław Broniek Computational Complexity of Solving

This volume considers the computational complexity of determining whether a system of equations over a fixed algebra A has a solution. It examines in detail the two problems this leads to: $\text{SysTermSat}(A)$ and $\text{SysPolSat}(A)$, in which equations are built out of terms or polynomials, respectively.

Computational Complexity of Solving Equation Systems

Automata and natural language theory are topics lying at the heart of computer science. Both are linked to computational complexity and together, these disciplines help define the parameters of what constitutes a computer, the structure of programs, which problems are solvable by computers, and a range of other crucial ...
