SNUG Boston 2008 Clock Domain Crossing (CDC) Design & Verification Rev 1.0 Techniques Using SystemVerilog 6 1.0 Introduction In 2001, I presented my first paper on multi-asynchronous clock design.

### **Clock Domain Crossing (CDC) Design & Verification**

Verification and validation are independent procedures that are used together for checking that a product, service, or system meets requirements and specifications and that it fulfills its intended purpose. These are critical components of a quality management system such as ISO 9000.

### **Verification and validation - Wikipedia**

In electronic design automation, functional verification is the task of verifying that the logic design conforms to specification. In everyday terms, functional verification attempts to answer the question "Does this proposed design do what is intended?"

### **Functional verification - Wikipedia**

Aldec, Inc. is an industry-leading Electronic Design Automation (EDA) company delivering innovative FPGA Design and Creation, Simulation and Functional Verification solutions to assist in the development of complex FPGA, ASIC, SoC and embedded system designs. With an active user community of over 35,000, 50+ global partners, offices worldwide ...

VERIFICATION vs VALIDATION are hugely confused and debated terms in the software testing world. You will encounter (or have encountered) all kinds of usage and interpretations of these terms, and it is our humble attempt here to distinguish between them as clearly as possible.
