teins in *E. coli*. The given protocols are focused on membrane protein expression in *E. coli*, but are generally applicable to membrane preparations independent of the source organism. In any case, it is recommended to use codon-optimized genes to avoid adverse effects due to differences in tRNA distribution between organisms. 118 Jan Kubicek et al.

Expression and Purification of Membrane Proteins

Timely and highly practical, *Membrane Protein Protocols: Expression, Purification, and Characterization* offers investigators proven methods to determine the three-dimensional structure of membrane receptors and transport proteins, as well as proven practical help in the discovery of new clinical targets for the design of novel pharmaceutical agents useful in treating cancer, bacterial and viral infection, and many metabolic diseases.

Instead, one chapter deals with the expression of the glycerol facilitator, which would have fit better into the preceding section, while the two remaining chapters are not generally applicable because of their focus on certain classes of eukaryotic membrane proteins. The real strength of *Membrane Protein Protocols* are the two other parts dealing with expression and purification, where 20 of the overall 25 chapters are located.
