Physical Science 1 Chapter 3 1 NEWTON'S LAWS OF MOTION Background: Aristotle believed that the natural state of motion for objects on the earth was one of rest .

**NEWTON'S LAWS OF MOTION - profpaz.com**

Newton's laws of motion describe the relationship between a body and the forces acting upon it, and its motion in response to those forces. For example, a ball in free fall has a constant acceleration towards the ground. Newton's laws are classical mechanics and are a subset of the more general theory of relativity.

**MINEQL+ is a powerful and easy-to-use chemical equilibrium modeling system that can be used to perform calculations on low temperature (0-50oC), low to moderate ionic strength (0.5 M) aqueous systems.**

**Momentum is a measurable quantity, and the measurement depends on the motion of the observer. For example: if an apple is sitting in a glass elevator that is descending, an outside observer, looking into the elevator, sees the apple moving, so, to that observer, the apple has a non-zero momentum.**
