In communications or computer systems, a configuration of a system refers to the arrangement of each of its functional units, according to their nature, number and chief characteristics.

### **Computer configuration - Wikipedia**

Introduction When creating ASP.NET 2.0 applications, developers commonly store sensitive configuration information in the Web.config file. The canonical example is database connection strings, but other sensitive information included in the Web.config file can include SMTP server connection information and user credentials, among others.
